

Emanuel Norman Putera Wardhana

Senior Frontend Web Developer

Sleman, Daerah Istimewa Yogyakarta | +6287759011123 | emanuelnpw@gmail.com | <https://linkedin.com/in/emanuelnpw>

SUMMARY

Frontend Web Engineer with 4+ years of experience building scalable web applications using React and TypeScript. Experienced in performance optimization, SSR, and SEO improvements using Next.js, especially for high-traffic e-commerce platforms. Strong expertise in state management, form handling, API integration, and building maintainable, type-safe frontend architecture. Contributed to frontend architectural improvements that helped achieve 132% OKR at JULO, the highest internally. Experienced in developing ERP web applications for business operations, reporting dashboards, and data management, as well as building digital products such as Polpma, a digital invitation platform focused on responsive design, clean user flow, and customizable templates. I enjoy building clean, maintainable applications and continuously looking for ways to improve code quality, performance, and the overall developer experience.

EDUCATION

- Duta Wacana Christian University** — Yogyakarta Graduated Feb 2020
(S-1, 3.29)

EXPERIENCE

- Frontend Web Developer**, Freelance Jan 2026 - Present
 - Built and maintained an ERP web application for RPS to support internal business operations and data management.
 - Developed frontend features for user management, customer data, configuration settings, and operational workflows.
 - Created reporting dashboards to help users monitor sales, area performance, volume, profit and loss, and customer debt summaries.
 - Integrated the frontend with backend APIs to display dynamic and up-to-date business data.
 - Turned complex business requirements into clean, structured, and user-friendly interfaces.
 - Implemented role-based and area-based access logic so users could only view and manage relevant data.
 - Focused on building reusable components and a maintainable frontend structure to support long-term scalability.
- Robotics Generalist**, Micro1 - Contract Jan 2026 - Apr 2026
 - Recorded synchronized video footage to ensure data accuracy and consistency
 - Followed strict technical protocols for data quality and labeling standards
 - Delivered high-quality motion and video datasets within project timelines
- Frontend Web Developer**, JULO - DKI Jakarta (Indonesia) Sep 2022 - Jan 2026
 - Led user tracking improvements, enhancing analytics accuracy and user behavior insights for better product decision-making.
 - Improved website performance by 23% through code splitting, lazy loading, and React Server-Side Rendering (SSR) on partner.julo.co.id/myim3.
 - Actively contributed to code reviews, ensuring code quality, performance, security, and adherence to frontend best practices.
 - Diagnosed and resolved bugs across web and WebView environments, improving application stability and user experience.
 - Collaborated closely with backend engineers, designers, and security teams to deliver robust, scalable, and high-quality products.
 - Developed reusable and modular frontend components, reducing duplication and improving development efficiency across multiple applications.
 - Applied DRY principles and prioritized code readability, enabling easier maintenance and smoother onboarding for future developers.
 - Designed and implemented CI/CD pipelines for frontend deployments, enabling faster, reliable, and automated release processes.
 - Implemented bundle size monitoring and warnings, ensuring JavaScript bundles remained optimized and lightweight.
 - Used Typescript extensively to enforce type safety, reduce runtime errors, and improve long-term code maintainability.
 - Styled applications using Emotion.js and CSS variables, ensuring consistent theming and design scalability across platforms.
 - Participated in API contract design, contributing from early discussions and analysis through implementation to ensure smooth frontend-backend integration.
 - Managed state effectively to ensure safe, predictable rendering and optimal performance in complex UI flows.
 - Developed unit tests using Jest, increasing code reliability and confidence during refactoring and feature development.

- **Frontend Web Developer**, SIRCLO by Icube - Yogyakarta (Indonesia) Oct 2021 - Sep 2022
 - Implemented frontend web applications using Next.js, React, and TypeScript, integrated with Magento for scalable e-commerce solutions.
 - Built and maintained core e-commerce features such as product listing, product detail pages, shopping cart, checkout, and order flow.
 - Optimized web performance and SEO using Server-Side Rendering (SSR), improving page load speed, crawlability, and overall user experience.
 - Integrated and consumed GraphQL APIs to efficiently process backend data, reduce overfetching, and improve frontend performance.
 - Performed data analysis and research on Facebook Ads campaigns, collaborating with marketing teams to optimize traffic acquisition and conversion performance.
- **Frontend Web Developer**, PT Transisi Teknologi Mandiri - Yogyakarta (Indonesia) Aug 2020 - Aug 2021
 - Designed responsive user interfaces across multiple device sizes.
 - Applied responsive design using CSS media queries and Bootstrap.
 - Optimized table layouts for usability on small screens.
 - Built dynamic and responsive data tables using Vue.js.

PROJECTS

- **JULO : Leadgen Standart Product** (Reactjs, Emotion.js, React Query) <https://partner.julo.co.id/myim3/login>

The website initially didn't have a scalable way to support multiple partners dynamically, which limited access and increased the risk of incorrect partner configurations. I worked closely with the backend team to design and implement a whitelist-based API that validates registered partner names, allowing partners to be managed dynamically at runtime without requiring frontend changes.
- **POLPMA : Online Wedding Invitation** (Preact, Tailwind) <https://polpma.com>

Polpma is a personal project. I'm building as a digital invitation platform that allows users to choose a wedding invitation template, customize the content, preview the result, and easily share the invitation link with their guests. One of the biggest challenges I faced was the design process, because I handled both the development and the visual direction myself. I had to think not only about how the website works, but also how it looks and feels to users, including the layout, colors, typography, spacing, and overall user flow. Through this project, I learned how to balance frontend engineering with UI/UX decisions to create a cleaner, simpler, and more user-friendly product.
- **PT Repro Putra Sukses : ERP System** (Reactjs, Tailwind, React Query) <https://app.reproputrasukses.co.id/login>

RPS is an ERP system project I worked on to help companies manage and monitor their operational data more efficiently. In this project, I focused on building frontend features for business processes such as user management, customer data, configuration settings, reporting dashboards, and operational summaries. One of the challenges was translating complex business requirements into clean and easy-to-use interfaces, especially because the system involved many data points, user roles, and validation rules. This project helped me improve my ability to build scalable frontend structures, handle dynamic API-driven data, and create maintainable UI flows for internal business applications.
- **Vibe Coding : Kloowear (AI Prompting)** (AI, HTML, Bootstrap) <https://kloowear.vercel.app>

The project involved building a unique outdoor-themed e-commerce website that appealed to young mountain and outdoor enthusiasts, while ensuring a responsive design and strong visual identity across different devices. I used AI-assisted prompting to quickly explore visual directions, color palettes, typography, and layout ideas inspired by outdoor and mountain aesthetics, then translated those ideas into a mobile-first frontend implementation. This approach helped speed up the design-to-development process, create a visually consistent brand experience, and deliver a fully responsive website that matched the preferences of the target audience.

SKILLS

Frontend:

- ReactJs
- NextJs
- Typescript
- React Table

Styling:

- Emotion.js (CSS-in-JS)
- Tailwind
- Bootstrap

Architecture & Performance:

- API Integration : API Caching (React Query) & API Overfetching (Axios: GraphQL)
- Website Performance : Lazy Loading, React Loader, Code Splitting, Reusable Component and React Context

Tools:

- Module Bundler : Vite SWC & Webpack
- Version Control : Git
- Code Quality : ES6, TS Config & Prettier
- Testing : Jest and React Testing Library
- Package Manager : yarn, npm and pnpm

AI-Assisted Development & Prompt Engineering:

- AI Prompt Engineering for UI/UX ideation and frontend development
- Leveraging generative AI for design exploration, layout iteration, and component prototyping
- Translating AI-generated concepts into responsive, production-ready frontend code

Licenses & Certifications:

- **Frontend Web Developer** (Certified by micro1) : <https://bit.ly/4vcchDu>
